

- NoSQL database name – OrientDB
- URL of NoSQL- <https://www.orientdb.org/>
- 1 ~ 2 paragraph description:

SQL is a query language that deals with relational databases. No-SQL (not SQL) is used for non-relational dbms. They are built for specific data models and have flexible schemas, which are widely used in modern applications. OrientDB is one such database that is classified as NoSQL database.

OrientDB is a NoSQL database that is written in java and combines traditional SQL while supporting various models such as graph, document, key/value model. The relationships are managed as in graph databases with direct connections between the records. OrientDB gives strong emphasis on security and reliability. The data can be queried either using a terminal console or use graph editor for interacting and visualizing with data.
